## Arborjet: TREE-äge Insecticide and PHOSPHO-jet Fungicide

September 9, 2013 - By [LM Staff0 Comments](#)

Share this via:

TREE-äge Insecticide and PHOSPHO-jet Fungicide recently received [registration](#) from the California Department of Pesticide

Regulation (CDPR), and are now labeled for use in the state. TREE-äge is applied through the Arborjet injection system in which the formulation is sealed inside the tree. Injecting TREE-äge directly into the tree's vascular system not only provides protection quickly, but is also effective in controlling insects that feed under the bark, according to the manufacturer. TREE-äge provides up to two years of control for insects like emerald ash borer (EAB) and mountain pine beetle. PHOSPHO-jet, a systemic fungicide, helps suppress various plant diseases like sudden oak death, anthracnose, *Phytophthora*, black spot, scab, fire blight in apple, root rot in avocado and citrus, canker blight and many others. PHOSPHO-jet inhibits fungal cells while eliciting a plant [health](#) response from the tree.
