

## FLOW RATE METER

### AccuFlo®

Knowing exactly how much you're spraying or drenching with most equipment can be difficult. Arborjet's AccuFlo Flow Rate Meter does all the math, making it easier than ever to get professional results without spending pro money.

Easy to use and offering consistent, repeatable results, the AccuFlo represents a shift in the way we apply liquid nutrients, insecticides, pesticides, and plant growth regulators.

Made from 3D printed carbon fiber, the AccuFlo is durable, but so light you'll forget you're wearing it. The AccuFlo works best on constant flow rate devices, so we recommend a battery pack sprayer for premium results.

### Why Use AccuFlo?

- Saves time and money by eliminating waste and guesswork
- You can quickly and easily make multiple treatments on different types and sizes of plants
- Use the AccuFlo to precisely measure applications of fertilizers, moisture management solutions, plant growth regulators or water soluble insecticides and fungicides

### AccuFlo Drench Kit (070-3000)

#### KIT INCLUDES

- AccuFlo Device
- USB Charging Cable
- Training Manual
- 4L Measuring Pitcher
- 500ml Measuring Pitcher
