About Us

OUR HISTORY - Arborjet was initially developed by arborists for arborists in 2000, in order to effectively manage and control exotic and native insects, pests, and diseases threatening our natural and urban forests. Today, as the leading provider of tree care solutions, Arborjet has partnered with Ecologel Solutions to offer an expanded lineup of environmentally responsible plant healthcare products that broaden the expert resources offered. Together, both are backed by years of research and provide the most effective and environmentally responsible treatment options. As premier solutions providers, they are committed to advancing the industries they serve through thought leadership, product and technology development, scientific research, and exceptional customer service.

OUR RESEARCH - Our unique method of developing formulations includes a pairing process which matches the active ingredient and application method with the physiology of the plant. Whether treating Ash Trees in Chicago, Palms in Miami, or tomato plants in Fresno, this approach is why you will find significantly longer residual control and superior overall performance with our products. Our ability to achieve such high levels of performance while maximizing uptake efficiency and protecting against phytotoxicity and other harmful side effects sets Arborjet and Ecologel apart.

OUR TEAM - At Arborjet and Ecologel, we care about you and your success. Many of our staff are Certified Arborists, Agronomists, Pest Control Advisors, and hold board positions in major industry associations. Our Technical Advisors have a combined total of over 250 years in the green industry. Your successful plant health care program helps us realize our mission.

Tree Injection

Trunk injection is the most effective alternative to spraying or soil applied pesticides for tree insect or pest control. Arborjet's trunk injection equipment injects formulations directly into the trunk where it is quickly taken up by the vascular system and distributed throughout the tree. With almost 20 years of research and development, our trunk injection systems and formulations are proven to give the best results when protecting trees from pests.

Problems & Solutions
